Utilizing Ultra-widefield Swept-Source OCT Angiography for the management of Diabetic Retinopathy.

**BACKGROUND**
A young diabetic patient with proliferative diabetic retinopathy.

**DIAGNOSIS**
Large areas of non-perfusion and significant increases in the proliferation of new vessels are visible between the first visit and 4-month follow-up for both eyes. PLEX® Elite 9000 from ZEISS enables high-speed, widefield imaging with increased scanning depth, ideal for visualizing widespread retinopathy in patients with advanced disease.
