NEW

ZEISS Victory SF 32

The ZEISS Victory SF line is the result of close collaboration between ZEISS engineers and experts in the field of birdwatching. The new ZEISS Victory SF 32 is designed and constructed to fulfill the needs of birders and wildlife enthusiasts and sets new standards, particularly in the areas of ergonomics, image quality and field of view.

Victory SF product benefits.

Extremely Wide Field of View

increases the observable area of interest by up to 20% in comparison with other binoculars. This offers you the best possible overview for locating the exact bird you are looking for.

20% more
observable area
than comparable competitors

SmartFocus Concept

ensures **optimum positioning of the focusing wheel**, and it takes **only 1.6 turns** to focus between the closest focusing distance and infinity. Extremely fast and precise focusing is assured.

ErgoBalance Concept

shifts the **center of gravity of the binoculars closer to the eyepieces**. This enables hours of fatigue-free observation.

• Heavy | • Light

90%
Light transmission

UFL Concept

(Ultra-Fluoride) guarantees the **highest resolution and color fidelity** to enable recognition of the finest details in seconds and confirm identification of bird species.
