

ZEISS Remote Health Check CMM

ZEISS Remote Health Check CMM

Proactive diagnosis to ensure best machine performance

The ZEISS Remote Health Check CMM is an innovative solution for assessing the condition of your coordinate measuring machine (CMM). Conduct the check independently to enable proactive analysis and diagnosis by ZEISS experts remotely. This service offers valuable insight into your CMM's mechanical and electronic components, facilitating informed maintenance and repair decisions. Regular checks help ensure measurement capability and increase machine availability, allowing you to identify potential issues and avoid unexpected failures.

From [service for the customer](#), to [service with the customer](#) - proactively improve the condition of your CMM through expert insights

Benefits:

- **Proactive analysis and diagnosis** to ensure highest mechanical and electronic performance of your CMM and increased uptime.
- **Remote check of the condition of your machine:** Collaborate with ZEISS experts to receive a comprehensive evaluation of your CMM's current condition, summarized in a detailed protocol.
- **Preventive maintenance:** Schedule planned repairs based on predictive recommendations, reducing the likelihood of unforeseen breakdowns and associated costs.
- **Identify potential issues:** Proactively detect and address potential issues that may affect your machine's performance, increasing its reliability and uptime.

Technical requirements:

- **ZEISS Machine Control:** Ensure that your CMM Operator PC has ZEISS Machine Control installed to initiate the ZEISS Remote Health Check process.
- **Reference sphere:** Perform a Remote Health Check with your reference sphere.
- **Online access:** A temporary internet connection is required to start the ZEISS Remote Health Check CMM and upload the data for the expert analysis.

Technical data:

- **Duration:** The health check process takes less than 1 hour, making it a time-efficient solution for your operational needs.
- **Expert analyzing:** Receive expert analysis and recommendations within 2 days of the health check, allowing for quick action on any identified issues.

ZEISS Machine Control

ZEISS Machine Control is a software specifically designed to control and monitor measuring machines. The software ensures that measurements are precise and repeatable, allowing our customers to guarantee that their products consistently meet required quality standards.
