Your challenge
More and more eye care practices are converting to digital data management. Having access to a collection of examination data from all instruments in one place can increase workflow efficiency significantly. Yet the integration and documentation of data from many diagnostic instruments which do not comply to the DICOM standard continue to be very cumbersome. Until now.

Our FORUM solution
With ZEISS FORUM LINK net, instruments from ZEISS as well as other manufacturers which do not have a DICOM interface can be seamlessly integrated into the enhanced data management workflow of ZEISS FORUM. With this application, images or reports from instruments without DICOM interface can be transferred and associated to the correct patient record in FORUM from ZEISS where they are stored as DICOM files. Moreover, patient demographics do not have to be keyed in. Instead, they can be selected from worklists created in ZEISS FORUM.
ZEISS FORUM LINK net

Key benefits

More user friendly:
- Easy rotation of pdfs (90° and 180°)
- Display and processing of images in all prevalent image formats (jpg, png, tif, gif, bmp)
- New user interface
- Possibility to edit additional parameters (like AquisitionDateTime, Accession number)

More efficient workflow possible through:
- Ability to select laterality individually per image or series
- Option to trigger end of series manually and send pictures any time
- New search parameter “last patient” allows quick finding of patient and saves time
- Easy connection of ZEISS FORUM LINK net to ZEISS FORUM via AutoConnect

Minimum requirements for FORUM LINK net from ZEISS

<table>
