

PhotoFusion[®] by ZEISS

On-hold Message

PhotoFusion by ZEISS self-tinting eyeglasses offer excellent vision under all light conditions. Indoors, and outdoors at night, the lenses remain clear. Outdoors on cloudy days, the lenses respond to reduced solar UV rays and turn semi-dark. In sunshine, the lenses are hit with the full intensity of the sun's rays, and darken to a true sunglass tint. PhotoFusion lenses maintain their color consistency in all tint stages, for a more natural viewing experience, and deliver 100% solar UV protection. Ask us about PhotoFusion lenses the next time you visit.
