Sunglass lenses with a mirror coating – who are they for?

They help you cultivate a unique look – and aren't just fashionable, but also entirely functional: sunglass lenses with a ZEISS DuraVision Mirror coating provide crystal-clear vision with significantly reduced reflections. This improves visual comfort, both in extreme light conditions, such as up in the mountains or in the snow, as well as on the beach, in the park or when you're shopping or playing sports. Two special coatings make this possible: an anti-reflective coating on the back surface of the lens and a mirror-coating on the front. DuraVision® Mirror sunglass lenses also repel dirt and are particularly easy to clean.

Here's our fashion tip: choose from eight different exciting mirror colors to ensure fabulous results – from red to green and blue and extending to silver and gold. Lenses with a mirror coating are an excellent match for metal frames of every shape.

Attention drivers: not all tints are suitable for driving.

No matter what your vision needs are, make sure you speak with your eye care professional to find a tint that's right for you. And of course, sunglass lenses with a ZEISS DuraVision Mirror coating offer 100% protection against UVA and UVB radiation.

DuraVision Mirror colors

ZEISS DuraVision Mirror coating is available in eight different colors.
